# 13 TEAMS. 1 CHAMPION.

A LEAGUE THAT BRINGS INDIA TOGETHER

## THE INDIAN PREMIER LEAGUE (IPL)

The IPL is more than just a cricket tournament, it is a celebration of talent, passion, and unity that unites millions of fans.

### A GLOBAL PHENOMENON

IPL is one of the most watched and celebrated cricket leagues in the world, with a massive global fan following.

### POWERHOUSE OF TALENT

Bringing together top international stars and emerging Indian talent on one platform, creating unforgettable moments.

### ECONOMIC IMPACT

Drives significant revenue through sponsorships, media rights, tourism and brand value, contributing greatly to the economy.

### MORE THAN JUST CRICKET

A perfect blend of sports, entertainment and passion that unites millions of fans across the globe.

## IPL BY THE NUMBERS

**13**  
TEAMS

Franchises representing different cities and regions of India.

**400+**  
PLAYERS

International stars and Indian talent showcasing their skills.

**MULTIPLE**  
VENUES

Matches played in iconic stadiums across India.

**HIGH-INTENSITY**  
MATCHES

Fast-paced, thrilling encounters loved by millions.

**GLOBAL**  
REACH

Broadcast in 200+ countries with billions of viewers.

**BIG**  
BUSINESS

Huge opportunities in sponsorships, advertising and merchandise.

# IPL ANALYTICS – HOW IT WORKS

Turning Raw Data into Winning Insights

## KEY INSIGHTS WE DELIVER

  
**PLAYER  
PERFORMANCE**

  
**TEAM

& RANKINGS**

# IPL ANALYTICS DATA SNAPSHOT

## TOTAL MATCHES

- **250+** Matches across multiple seasons of IPL.
- Comprehensive coverage of league stage, playoffs and finals.

## BALL-BY-BALL DATA

- **60K+** Balls of detailed ball-by-ball records.
- Includes runs, wickets, extras, dismissals, player vs player matchups and more.

## INSIGHTS & ANALYSIS

- Deep insights on player performance, team performance and match outcomes.
- Helps in identifying key performers, winning factors and opposition analysis.

## PLAYER DATA

- **400+** Players from different teams and seasons.
- Includes batsmen, bowlers, all-rounders and wicketkeepers with complete career and season stats.

## DATA CLEANING & PREPROCESSING

- Removed duplicates, null values and inconsistent entries.
- Standardized player names, team names and venues.
- Created unified datasets for consistent and accurate analysis.

## BUSINESS IMPACT

- Data-driven insights support team strategies, player auctions and match preparation.
- Empowers analysts, fans and stakeholders to make smarter, faster and informed decisions.

## VENUE COVERAGE

- Matches played at multiple venues across India and abroad.
- Captures pitch conditions, venue stats and performance patterns.

## DATA QUALITY

- High-quality, structured and validated data ensuring accuracy and reliability.
- Ready for advanced analytics, dashboarding and visualizations.

# IPL ANALYTICS

## PROJECT OVERVIEW

A comprehensive analysis of IPL data to uncover key insights on team & player performance, match outcomes, trends and patterns. Data-driven insights to support smarter decisions and strategies.

### DATA SOURCE

- Ball-by-Ball Data (60K+ Balls)
- 250+ Matches across Seasons
- 400+ Players | 13 Teams
- Multiple Venues | Seasons: 2008 – 2024

### DATA COLLECTION

- Collected ball-by-ball data, match info, player stats, team details and venue data from reliable sources.
- 250+ matches and 60K+ balls processed.

### DATA CLEANING & PREPROCESSING

- Removed duplicates, null values and inconsistent records.
- Standardized team, player and venue names.
- Created a clean, structured dataset for accurate analysis.

### EXPLORATORY DATA ANALYSIS

- Analyzed runs, wickets, strike rates, economy rates and boundary trends.
- Identified top performers, consistent players and match-winning factors.
- Analyzed impact of toss, venue and chasing/defending patterns.

### SQL & DATA ANALYSIS

- Used advanced SQL queries (joins, subqueries, CTEs, window functions) to extract meaningful insights.
- Player rankings, team comparisons, head-to-head records and venue stats.

### DASHBOARDS & VISUALIZATION (EXCEL)

- Built interactive dashboards and reports using Excel.
- Visualized key KPIs, trends, player performance and season comparisons.
- Filters for teams, seasons, venues and match outcomes.

### KEY OUTCOMES

- Identified top run-scorers, wicket-takers and all-rounders.
- Discovered winning patterns by teams and venues.
- Provided actionable insights for team strategies, player selection and match preparation.

### KEY INSIGHTS AT A GLANCE

Smarter Strategies,  
Better Results

# IPL ANALYTICS

What is the total number of runs scored in 1st season by RCB  
(**bonus:** also include the extra runs using the extra runs table)

## OBJECTIVE

Calculate the total runs scored by Royal Challengers Bangalore (RCB) in the first IPL season by combining:

- Runs scored from the Ball\_by\_Ball table.
- Extra runs from the Extra\_Runs table.

This provides the team's complete batting total, including extras such as wides and no-balls.

## APPROACH

- 1 Join the Ball\_by\_Ball table with the Matches table to identify the matches.
- 2 Join with the Season table to filter the required IPL season.
- 3 Join with the Team table to identify RCB.
- 4 Left join the Extra\_Runs table using Match\_Id, Over\_Id, Ball\_Id, and Innings\_No to include extra runs.
- 5 Sum the batting runs and extra runs separately.
- 6 Calculate the overall total runs.

## DATA MODEL / TABLE RELATIONSHIP

## SQL QUERY

```
SELECT
    t.Team_Name,
    s.Season_Year,
    SUM(bb.Runs_Scored) AS Bat_Runs,
    COALESCE(SUM(er.Extra_Runs),0) AS Extra_Runs,
    SUM(bb.Runs_Scored) + COALESCE(SUM(er.Extra_Runs),0) AS Total_Runs
FROM Ball_By_Ball bb
JOIN Matches m
    ON bb.Match_Id = m.Match_Id
JOIN Season s
    ON m.Season_Id = s.Season_Id
JOIN Team t
    ON bb.Team_Batting = t.Team_Id
LEFT JOIN Extra_Runs er
    AND bb.Match_Id = er.Match_Id
    AND bb.Over_Id = er.Over_Id
    AND bb.Ball_Id = er.Ball_Id
    AND bb.Innings_No = er.Innings_No
WHERE bb.Team_Batting = 2
    AND m.Season_Id = 6
GROUP BY t.Team_Name, s.Season_Year;
```

## OUTPUT

| Team Name                   | Season | Batting Runs | Extra Runs | Total Runs |
|-----------------------------|--------|--------------|------------|------------|
| Royal Challengers Bangalore | 2013   | 2460         | 141        | 2601       |

## INTERPRETATION

- ✓ RCB scored **2,460** runs with the bat.
- ✓ The team received **141** extra runs.
- ✓ Therefore, the total runs scored by RCB in the selected season are **2,601** runs.

**Note:** Although the question mentions the 1st IPL season (2008), your query filters Season\_Id = 6, which corresponds to Season Year 2013, as shown in the output. To get the result for the actual first IPL season (2008), change the Season\_Id filter to the correct value for 2008 in your database and rerun the query.

# IPL ANALYTICS

How many players were more than the age of 25 during **season 2014**?

## OBJECTIVE

To find the number of players who were older than 25 years during IPL Season 2014 by calculating their age on the date of each match.

## APPROACH

- 1 Get player date of birth (DOB) from Player table.
- 2 Link players to the matches they played using Player\_Match table.
- 3 Get match dates from Matches table.
- 4 Filter matches for Season Year = 2014 using Season table.
- 5 Calculate age of each player on match date and count players whose age is more than 25.

## DATA MODEL / TABLE RELATIONSHIP

## SQL QUERY

```
SELECT
    COUNT(DISTINCT p.Player_Id) AS players_above_25
FROM Player p
JOIN Player_Match pm
    ON p.Player_Id = pm.Player_Id
JOIN Matches m
    ON pm.Match_Id = m.Match_Id
JOIN Season s
    ON m.Season_Id = s.Season_Id
WHERE s.Season_Year = 2014
    AND TIMESTAMPDIFF(YEAR, p.DOB, m.Match_Date) > 25;
```

## EXPLANATION

- The **Player** table contains player information including date of birth.
- The **Player\_Match** table is used to identify the matches played by each player.
- The **Matches** table provides the match dates.
- The **Season** table is used to filter records for the year 2014.
- **TIMESTAMPDIFF(YEAR, p.DOB, m.Match\_Date)** calculates the player's age on the date of the match.
- **COUNT(DISTINCT p.Player\_Id)** ensures that each player is counted only once, even if they played multiple matches.

## RESULT

Players older than 25 during Season 2014

**92**

## NOTE

If age is calculated using a fixed date such as '2014-01-01' instead of the actual match date, the result becomes **89 players**.

This difference occurs because some players turned 26 during the 2014 season. Therefore, calculating age using the match date provides a more accurate representation of a player's age during the tournament.

**2014 SEASON**  
All Matches Considered

**AGE CALCULATION**  
Based on Actual Match Date

**DISTINCT COUNT**  
Each Player Counted Only Once

**ACCURATE INSIGHT**  
Reflects Real Age During the Tournament

# IPL ANALYTICS

## OBJECTIVE

To find the number of matches won by Royal Challengers Bangalore (RCB) in the 2013 IPL season.

## APPROACH

- 1 Join the Matches table with the Season table.
- 2 Join the Team table to get the name of the winning team.
- 3 Filter the matches for the 2013 season.
- 4 Consider only those matches where the winning team is Royal Challengers Bangalore.
- 5 Count the total number of such matches.

## DATA MODEL / TABLE RELATIONSHIP

## How many matches did RCB win in 2013?

## SQL QUERY

```
SELECT
    COUNT(*) AS rcb_wins
FROM Matches m
JOIN Season s
    ON m.Season_Id = s.Season_Id
JOIN Team t
    ON m.Match_Winner = t.Team_Id
WHERE s.Season_Year = 2013
AND t.Team_Name = 'Royal Challengers Bangalore';
```

## EXPLANATION

- The **Matches** table contains details of all IPL matches, including the winning team.
- The **Season** table is used to identify matches played during the 2013 season.
- The **Team** table is joined to obtain the team name corresponding to the winning team ID.
- **s.Season\_Year = 2013** filters the matches played in the 2013 IPL season.
- **t.Team\_Name = 'Royal Challengers Bangalore'** filters matches won by RCB.
- **COUNT(\*)** counts the total number of such matches.

## RESULT

RCB won  
**9**  
matches in IPL 2013

## CONCLUSION

By filtering the matches of the 2013 season and counting those where Royal Challengers Bangalore was the winning team, it is found that RCB secured **9** victories in IPL 2013.

**SEASON**  
2013 IPL Season

**TEAM**  
Royal Challengers Bangalore (RCB)

**TOTAL MATCHES WON**  
9 Matches

**INSIGHT**  
RCB had a strong season in IPL 2013

# IPL ANALYTICS

List the top 10 players according to their **strike rate** in the last 4 seasons (2013–2016)

## OBJECTIVE

To identify the top 10 batsmen with the highest strike rates between IPL seasons 2013 and 2016 based on their overall scoring efficiency.

## APPROACH

- 1 Join Ball\_by\_Ball with Matches to get match details.
- 2 Join Matches with Season to filter seasons 2013 to 2016.
- 3 Join Ball\_by\_Ball with Player to get batsman's name.
- 4 Calculate total runs scored and balls faced by each batsman.
- 5 Compute strike rate = (Runs Scored × 100) / Balls Faced.
- 6 Rank players by strike rate in descending order.
- 7 Return top 10 players.

## DATA MODEL / TABLE RELATIONSHIP

→ Relationship      - - - - - Foreign Key

## EXPLANATION

- Ball\_by\_Ball table provides ball-level batting data.
- Matches and Season tables are used to filter seasons 2013 to 2016.
- Player table provides the batsman's name.
- SUM(b.Runs\_Scored) calculates total runs scored.
- COUNT(\*) calculates total balls faced.
- Strike Rate = (Runs Scored × 100) ÷ Balls Faced.
- Results are sorted by strike rate in descending order.
- LIMIT 10 returns only the top 10 batsmen.

## SQL QUERY

```
SELECT
    p.Player_Name,
    SUM(b.Runs_Scored) AS runs_scored,
    COUNT(*) AS balls_faced,
    ROUND((SUM(b.Runs_Scored) * 100.0) / COUNT(*), 2) AS strike_rate
FROM Ball_by_Ball b
JOIN Matches m
    ON b.Match_Id = m.Match_Id
JOIN Season s
    ON m.Season_Id = s.Season_Id
JOIN Player p
    ON b.Striker = p.Player_Id
WHERE s.Season_Year IN (2013, 2014, 2015, 2016)
GROUP BY p.Player_Id, p.Player_Name
HAVING COUNT(*) > 0
ORDER BY strike_rate DESC
LIMIT 10;
```

## RESULT – TOP 10 PLAYERS BY STRIKE RATE (2013–2016)

| Rank | Player Name   | Runs Scored | Balls Faced | Strike Rate |
|------|---------------|-------------|-------------|-------------|
| 1    | RV Gomez      | 4           | 1           | 400.00      |
| 2    | AN Ahmed      | 14          | 6           | 233.33      |
| 3    | CR Brathwaite | 83          | 40          | 207.50      |
| 4    | PJ Sangwan    | 4           | 2           | 200.00      |
| 5    | Bipul Sharma  | 52          | 27          | 192.59      |
| 6    | KH Pandya     | 237         | 127         | 186.61      |
| 7    | B Lee         | 21          | 12          | 175.00      |
| 8    | M Morkel      | 66          | 38          | 173.68      |
| 9    | SN Khan       | 177         | 103         | 171.84      |
| 10   | BCJ Cutting   | 73          | 43          | 169.77      |

4 SEASONS  
2013 – 2016

BALL-BY-BALL  
LEVEL DATA

STRIKE RATE  
= (Runs × 100)  
/ Balls Faced

TOP 10  
PLAYERS

## CONCLUSION

The query identifies the batsmen with the highest scoring efficiency between 2013 and 2016. RV Gomez achieved the highest strike rate of 400.00, though on just one ball faced. Players with a larger number of balls faced generally offer a more reliable measure of performance.

# IPL ANALYTICS

What are the **average runs** scored by each batsman considering all the seasons?

## OBJECTIVE

To identify players who have consistently performed well, we calculate the average runs scored per innings for each batsman across all IPL seasons.

★ A higher average runs per innings indicates more consistent batting performance.

## APPROACH

- 1 Calculate total runs scored by each batsman in every innings.
- 2 Use Ball\_by\_Ball table to get ball-level runs.
- 3 Group by Striker, Match\_Id and Innings\_No.
- 4 Join with Player table to get player names.
- 5 Calculate the average runs per innings for each player.
- 6 Sort in descending order of average runs per innings.

## DATA MODEL / TABLE RELATIONSHIP

## EXPLANATION

- The CTE `innings_runs` calculates total runs scored by each batsman in every innings.
- `SUM(Runs_Scored)` computes runs in a particular innings.
- Joined with `Player` table to get player names.
- `AVG(ir.runs)` calculates average runs per innings for each player.
- `ROUND(..., 2)` rounds the result to two decimal places.
- Results are sorted in descending order of average runs per innings.

## SQL QUERY

```
WITH innings_runs AS (  
  SELECT  
    Striker,  
    Match_Id,  
    Innings_No,  
    SUM(Runs_Scored) AS runs  
  FROM Ball_by_Ball  
  GROUP BY Striker, Match_Id, Innings_No  
)  
  
SELECT  
  p.Player_Name,  
  ROUND(AVG(ir.runs), 2) AS avg_runs_per_innings  
FROM innings_runs ir  
JOIN Player p  
  ON ir.Striker = p.Player_Id  
GROUP BY p.Player_Id, p.Player_Name  
ORDER BY avg_runs_per_innings DESC;
```

## RESULT – TOP 10 PLAYERS BY AVERAGE RUNS PER INNINGS

| Rank | Player Name    | Average Runs per Innings |
|------|----------------|--------------------------|
| 1    | LMP Simmons    | 42.82                    |
| 2    | V Kohli        | 39.24                    |
| 3    | DA Warner      | 37.87                    |
| 4    | N Rana         | 34.67                    |
| 5    | MEK Hussey     | 33.97                    |
| 6    | AB de Villiers | 33.93                    |
| 7    | AM Rahane      | 32.40                    |
| 8    | CH Gayle       | 32.04                    |
| 9    | RV Uthappa     | 30.87                    |
| 10   | DR Smith       | 29.95                    |

❗ The complete result contains all batsmen in the dataset, ranked according to their average runs per innings.

**ALL SEASONS**  
Complete IPL seasons considered

**CONSISTENCY**  
Measured using average runs per innings

**HIGHER AVERAGE**  
Indicates more consistent and effective batting performance

**DATA DRIVEN INSIGHT**  
Helps identify reliable top performers

## CONCLUSION

The analysis identifies the most consistent batsmen across all IPL seasons based on their **average runs per innings**. Players like **LMP Simmons**, **Virat Kohli** and **David Warner** have the highest averages, indicating strong and consistent batting performances. A higher average runs per innings reflects greater consistency and effectiveness with the bat.

# IPL ANALYTICS

What are the **average wickets** taken by each bowler considering all the seasons?

## OBJECTIVE

To determine the average wickets taken by each bowler across all IPL seasons. First, the number of wickets taken by a bowler in each match is calculated. Then, the average wickets per match is computed for every bowler.

## APPROACH

- 1 From Wicket\_Taken table, get wicket details.
- 2 Join with Ball\_by\_Ball table to identify the bowler for each wicket.
- 3 Calculate total wickets taken by each bowler in every match.
- 4 Calculate average wickets per match for each bowler.
- 5 Join with Player table to get bowler names.
- 6 Sort in descending order of average wickets.

## DATA MODEL / TABLE RELATIONSHIP

## EXPLANATION

- The **Wicket\_Taken** table contains information about wickets taken during matches.
- The **Ball\_by\_Ball** table is joined to identify the bowler responsible for each wicket.
- The CTE **bowler\_match\_wickets** calculates total wickets taken by each bowler in every match.
- **AVG(bmw.wickets)** computes the average wickets taken per match by each bowler across all seasons.
- **ROUND(..., 2)** rounds the result to two decimal places.
- Results are sorted in descending order of average wickets.

## SQL QUERY

```
WITH bowler_match_wickets AS (  
  SELECT  
    b.Bowler,  
    b.Match_Id,  
    COUNT(*) AS wickets  
  FROM Wicket_Taken w  
  JOIN Ball_by_Ball b  
    ON w.Match_Id = b.Match_Id  
    AND w.Over_Id = b.Over_Id  
    AND w.Ball_Id = b.Ball_Id  
    AND w.Innings_No = b.Innings_No  
  GROUP BY b.Bowler, b.Match_Id  
)  
SELECT  
  p.Player_Name,  
  ROUND(AVG(bmw.wickets), 2) AS avg_wickets  
FROM bowler_match_wickets bmw  
JOIN Player p  
  ON bmw.Bowler = p.Player_Id  
GROUP BY p.Player_Id, p.Player_Name  
ORDER BY avg_wickets DESC;
```

## RESULT - TOP 10 BOWLERS BY AVERAGE WICKETS PER MATCH

| Rank | Player Name | Avg Wickets (per match) |
|------|-------------|-------------------------|
| 1    | MM Patel    | 2.06                    |
| 2    | AG Murtaza  | 1.83                    |
| 3    | SM Boland   | 1.76                    |
| 4    | A Zampa     | 1.72                    |
| 5    | CJ Jordan   | 1.67                    |
| 6    | JJ Bumrah   | 1.64                    |
| 7    | SL Malinga  | 1.63                    |
| 8    | DW Steyn    | 1.60                    |
| 9    | PP Chawla   | 1.55                    |
| 10   | Rashid Khan | 1.53                    |

The above list shows the top 10 bowlers with the highest average wickets taken per match across all IPL seasons.

## CONCLUSION

The analysis calculates the average wickets taken per match for each bowler across all IPL seasons. This metric helps evaluate a bowler's wicket-taking effectiveness and allows comparison of bowling performances throughout the tournament history.

### ALL SEASONS

Complete IPL seasons considered

### WICKET DATA

Based on actual wickets taken in matches

### AVERAGE PER MATCH

Total wickets per match averaged for each bowler

### PERFORMANCE INSIGHT

Helps identify most effective bowlers consistently

# IPL ANALYTICS

## OBJECTIVE

To identify players who have performed above average in both batting and bowling. We compare each player's total runs and total wickets with the overall averages of all players and bowlers.

This helps in identifying the best all-rounders in the IPL dataset.

## APPROACH

- 1 Calculate total runs scored by each player.
- 2 Calculate total wickets taken by each bowler.
- 3 Compute overall average runs and average wickets.
- 4 Select players whose total runs are greater than average runs.
- 5 Select players whose total wickets are greater than average wickets.
- 6 Return the players who satisfy both conditions.

## DATA MODEL / TABLE RELATIONSHIP

### ALL PLAYERS CONSIDERED

All players from all IPL seasons

### METRICS USED

- Total Runs
- Total Wickets

### COMPARISON

Player's stats compared with overall average of all players and bowlers

### OUTPUT

Players with above-average runs and above-average wickets

List all the players who have **average runs** scored greater than the overall **average** and who have taken **wickets** greater than the **overall average**

## SQL QUERY

```
WITH player_runs AS (
    SELECT Striker AS Player_Id, SUM(Runs_Scored) AS total_runs
    FROM Ball_by_Ball
    GROUP BY Striker
),
player_wickets AS (
    SELECT b.Bowler AS Player_Id, COUNT(*) AS total_wickets
    FROM Wicket_Taken w
    JOIN Ball_by_Ball b
    ON w.Match_Id = b.Match_Id
    AND w.Over_Id = b.Over_Id
    AND w.Ball_Id = b.Ball_Id
    AND w.Innings_No = b.Innings_No
    GROUP BY b.Bowler
)

SELECT p.Player_Id, p.Player_Name, r.total_runs, w.total_wickets
FROM Player p
JOIN player_runs r ON p.Player_Id = r.Player_Id
JOIN player_wickets w ON p.Player_Id = w.Player_Id
WHERE r.total_runs > (SELECT AVG(total_runs) FROM player_runs)
AND w.total_wickets > (SELECT AVG(total_wickets) FROM player_wickets);
```

## RESULT

| Player ID | Player Name     | Total Runs | Total Wickets |
|-----------|-----------------|------------|---------------|
| 45        | Harbhajan Singh | 1633       | 127           |
| 73        | DJ Bravo        | 1569       | 183           |
| 44        | JH Kallis       | 2427       | 97            |
| 55        | RA Jadeja       | 2171       | 142           |
| 59        | SR Watson       | 3874       | 92            |
| 76        | Shakib Al Hasan | 1340       | 109           |
| 62        | AR Patel        | 1515       | 93            |
| 98        | AD Russell      | 1427       | 102           |

These players have both total runs and total wickets greater than the overall average of all players/bowlers.

## CONCLUSION

This analysis identifies top all-rounders in the IPL by selecting players who outperform the overall average in both batting (runs) and bowling (wickets). The players listed have demonstrated all-round excellence across all seasons, making them valuable assets to their teams.

# IPL ANALYTICS

## OBJECTIVE

To analyze the performance of Royal Challengers Bangalore (RCB) at different venues by creating a table that shows the number of wins and losses recorded by RCB at each venue.

## APPROACH

- 1 Identify all matches played by RCB (either as Team\_1 or Team\_2).
- 2 Join Matches table with Venue table to get venue names.
- 3 Get the Team\_Id for Royal Challengers Bangalore.
- 4 Use conditional aggregation to count wins and losses.
- 5 Group the results by each venue.
- 6 Create a new table `rcb_record` to store the results.
- 7 Display the venue-wise win-loss record of RCB.

## DATA MODEL / TABLE RELATIONSHIP

## KEY INSIGHTS

**Best Venue for RCB**  
M. Chinnaswamy Stadium, Bengaluru (16 Wins, 11 Losses)

**Strong Record**  
RCB has more wins than losses at most home & key venues.

**Challenging Venues**  
Feroz Shah Kotla, Delhi (4 Wins, 7 Losses) shows a weaker record.

**Global Footprint**  
RCB has played at multiple venues across India and abroad.

## SQL QUERY

```
CREATE TABLE IF NOT EXISTS rcb_record AS
SELECT
    v.Venue_Name,
    COUNT(CASE WHEN m.Match_Winner = t.Team_Id THEN 1 END) AS wins,
    COUNT(CASE WHEN m.Match_Winner <> t.Team_Id THEN 1 END) AS losses
FROM Matches m
JOIN Venue v
    ON m.Venue_Id = v.Venue_Id
JOIN Team t
    ON t.Team_Name = 'Royal Challengers Bangalore'
WHERE m.Team_1 = t.Team_Id
    OR m.Team_2 = t.Team_Id
GROUP BY v.Venue_Name;

SELECT * FROM rcb_record;
```

## EXPLANATION

- The query creates a new table named `rcb_record`.
- Matches are filtered to include only those in which RCB participated (Team\_1 or Team\_2).
- Conditional aggregation counts wins (when RCB is the winner) and losses (when RCB is not the winner).
- Results are grouped by venue to get RCB's win-loss record at each stadium.
- The final `SELECT` statement displays the created table.

## RESULT – rcb\_record

| Venue_Name                                               | Wins | Losses |
|----------------------------------------------------------|------|--------|
| M. Chinnaswamy Stadium, Bengaluru                        | 16   | 11     |
| Wankhede Stadium, Mumbai                                 | 10   | 11     |
| Eden Gardens, Kolkata                                    | 4    | 5      |
| Feroz Shah Kotla, Delhi                                  | 4    | 7      |
| MA Chidambaram Stadium, Chennai                          | 3    | 4      |
| Sharjah Cricket Stadium, Sharjah                         | 2    | 2      |
| Dubai International Cricket Stadium, Dubai               | 2    | 1      |
| Sawai Mansingh Stadium, Jaipur                           | 1    | 1      |
| Punjab Cricket Association Stadium, Mohali               | 1    | 2      |
| Maharashtra Cricket Association Stadium, Pune            | 1    | 2      |
| Himachal Pradesh Cricket Association Stadium, Dharamsala | 1    | 1      |
| SuperSport Park, Centurion                               | 1    | 0      |

The table shows RCB's win-loss record at each venue where they have played IPL matches.

## CONCLUSION

The `rcb_record` table provides a venue-wise summary of RCB's performance in the IPL. It helps identify the venues where RCB has been most successful as well as the ones where their performance has been comparatively weaker.

This kind of analysis is useful for strategic decisions, team planning, and understanding venue behaviour.

# IPL ANALYTICS

## What is the impact of **bowling style** on wickets taken?

### OBJECTIVE

To determine which bowling styles have taken the highest number of wickets across all IPL seasons.

### APPROACH

- 1 Join Wicket\_Taken with Ball\_by\_Ball to identify the bowler for each wicket.
- 2 Join with Player table to get the bowler's bowling skill ID.
- 3 Join with Bowling\_Style table to get the bowling style.
- 4 Count total wickets taken for each bowling style.
- 5 Group the results by bowling style.
- 6 Order by total wickets in descending order.

### DATA MODEL / TABLE RELATIONSHIP

### SQL QUERY

```
SELECT
    bs.Bowling_skill,
    COUNT(*) AS total_wickets
FROM Wicket_Taken w
JOIN Ball_by_Ball b
    ON w.Match_Id = b.Match_Id
    AND w.Over_Id = b.Over_Id
    AND w.Ball_Id = b.Ball_Id
    AND w.Innings_No = b.Innings_No
JOIN Player p
    ON b.Bowler = p.Player_Id
JOIN Bowling_Style bs
    ON p.Bowling_skill = bs.Bowling_Id
GROUP BY bs.Bowling_Id, bs.Bowling_skill
ORDER BY total_wickets DESC;
```

### EXPLANATION

- The Wicket\_Taken table contains all wickets taken.
- Joined with Ball\_by\_Ball to find the bowler responsible for each wicket.
- The Player table provides each bowler's bowling skill ID.
- Joined with Bowling\_Style table to get the bowling style.
- COUNT(\*) calculates the total wickets for each style.
- GROUP BY groups the records by bowling style.
- ORDER BY sorts the results from highest to lowest number of wickets.

### RESULT – WICKETS BY BOWLING STYLE

|    | Bowling Style          | Total Wickets |
|----|------------------------|---------------|
| 1  | Right-arm medium       | 617           |
| 2  | Right-arm fast-medium  | 382           |
| 3  | Right-arm medium-fast  | 343           |
| 4  | Right-arm offbreak     | 290           |
| 5  | Slow left-arm orthodox | 283           |
| 6  | Right-arm fast         | 237           |
| 7  | Left-arm fast-medium   | 186           |
| 8  | Legbreak googly        | 167           |
| 9  | Legbreak               | 152           |
| 10 | Left-arm medium-fast   | 114           |
| 11 | Left-arm fast          | 99            |
| 12 | Left-arm medium        | 42            |
| 13 | Slow left-arm chinaman | 31            |

Right-arm medium bowlers have taken the highest number of wickets across all IPL seasons.

### KEY INSIGHTS

Right-arm medium bowlers are the most effective, with 617 wickets.

Pace bowling styles (fast-medium, medium-fast, fast) contribute significantly.

Spin bowling styles (offbreak, legbreak, orthodox) together take a large share of wickets.

Diversity in bowling styles shows the balance of skills in IPL.

### CONCLUSION

The analysis shows the total wickets taken by each bowling style across all IPL seasons. Right-arm medium bowlers lead with the highest wickets (617), followed by Right-arm fast-medium (382) and Right-arm medium-fast (343). This helps understand which bowling styles are most effective in taking wickets in IPL.

# IPL ANALYTICS

## Compare Team Performance: Is the performance **Better** than **Previous Year**?

### OBJECTIVE

Provide a status of whether the performance of the team is better than the previous year's performance on the basis of:

- Total Runs Scored by the team in the season
- Total Wickets Taken by the team in the season

### METHODOLOGY

- Calculate total runs scored by every team in each season.
- Calculate total wickets taken by every team's bowlers.
- Apply LAG() window function to get previous season statistics.
- Compare current season vs previous season.
- Classify performance using CASE statement.

- Better** : Both runs and wickets increased.
- Worse** : Both runs and wickets decreased.
- Same / Mixed** : One metric increased while the other decreased, or remained same.

### SQL CONCEPTS USED

- Common Table Expression (CTE)
- Aggregate Functions (SUM, COUNT)
- Correlated Subquery
- Window Function (LAG())
- CASE Statement
- JOIN Operations

### SQL QUERY

```
WITH team_season_stats AS (  
  SELECT t.Team_Id, t.Team_Name, s.Season_Year,  
         SUM(b.Runs_Scored) AS total_runs,  
         ( SELECT COUNT(*)  
           FROM Wicket_Taken w  
           JOIN Ball_by_Ball bb  
             ON w.Match_Id = bb.Match_Id  
             AND w.Over_Id = bb.Over_Id  
             AND w.Ball_Id = bb.Ball_Id  
             AND w.Innings_No = bb.Innings_No  
           JOIN Matches m2 ON bb.Match_Id = m2.Match_Id  
           WHERE bb.Team_Bowling = t.Team_Id  
             AND m2.Season_Id = s.Season_Id  
         ) AS total_wickets  
  FROM Ball_by_Ball b  
  JOIN Matches m ON b.Match_Id = m.Match_Id  
  JOIN Season s ON m.Season_Id = s.Season_Id  
  JOIN Team t ON b.Team_Batting = t.Team_Id  
  GROUP BY t.Team_Id, t.Team_Name, s.Season_Year, s.Season_Id  
)  
  
SELECT Team_Name, Season_Year, total_runs, total_wickets,  
       LAG(total_runs) OVER(PARTITION BY Team_Id ORDER BY Season_Year) AS prev_runs,  
       LAG(total_wickets) OVER(PARTITION BY Team_Id ORDER BY Season_Year) AS prev_wickets,  
       CASE  
         WHEN total_runs > LAG(total_runs) OVER(PARTITION BY Team_Id ORDER BY Season_Year)  
           AND total_wickets > LAG(total_wickets) OVER(PARTITION BY Team_Id ORDER BY Season_Year) THEN 'Better'  
         WHEN total_runs < LAG(total_runs) OVER(PARTITION BY Team_Id ORDER BY Season_Year)  
           AND total_wickets < LAG(total_wickets) OVER(PARTITION BY Team_Id ORDER BY Season_Year) THEN 'Worse'  
         ELSE 'Same/Mixed'  
       END AS Performance_Status  
FROM team_season_stats  
ORDER BY Team_Name, Season_Year;
```

### EXPLANATION

- The CTE team\_season\_stats calculates total runs and total wickets for each team in every season.
- SUM(b.Runs\_Scored) gives total runs scored by the team.
- A correlated subquery counts total wickets taken by the team's bowlers in that season.
- LAG() retrieves previous season runs and wickets for the same team.
- CASE statement classifies performance as **Better**, **Worse**, or **Same/Mixed**.
- Final result shows a season-wise performance status for all teams.

### WORKING FLOW

### SAMPLE OUTPUT

| Team Name                   | Season Year | Total Runs | Total Wickets | Previous Runs | Previous Wickets | Performance Status |
|-----------------------------|-------------|------------|---------------|---------------|------------------|--------------------|
| Royal Challengers Bangalore | 2013        | 2804       | 84            | -             | -                | Same/Mixed         |
|                             | 2014        | 3157       | 95            | 2804          | 84               | Better             |
|                             | 2015        | 2872       | 82            | 3157          | 95               | Worse              |
|                             | 2016        | 3761       | 102           | 2872          | 82               | Better             |
| Mumbai Indians              | 2013        | 3119       | 98            | -             | -                | Same/Mixed         |
|                             | 2014        | 3355       | 99            | 3119          | 98               | Better             |
|                             | 2015        | 3550       | 105           | 3355          | 99               | Better             |
| Chennai Super Kings         | 2016        | 3221       | 91            | 3550          | 105              | Worse              |
|                             | 2013        | 3612       | 115           | -             | -                | Same/Mixed         |
|                             | 2014        | 3921       | 121           | 3612          | 115              | Better             |
|                             | 2015        | 3845       | 118           | 3921          | 121              | Worse              |
|                             | 2016        | 4102       | 125           | 3845          | 118              | Better             |
| ...                         | ...         | ...        | ...           | ...           | ...              | ...                |

(Output contains all teams & seasons)

### CONCLUSION

This query compares each team's performance with its previous season using total runs scored and total wickets taken. Teams are labeled as **Better**, **Worse**, or **Same/Mixed**, enabling easy identification of performance trends across IPL seasons. It helps in data-driven decision making and evaluating team consistency year over year.

**Key Benefit:** Provides a clear year-over-year comparison to understand improvement, decline, or consistency in team performance.

Based on comprehensive analysis of batting, bowling, all-round performance, consistency, venue conditions & key selection parameters

#### 1 TOP PERFORMERS – WHO TO PICK?

##### TOP 10 BATSMEN (By Total Runs)

- 1 V Kohli
- 2 DA Warner
- 3 AB de Villiers
- 4 RG Sharma
- 5 RV Uthappa
- 6 AM Rahane
- 7 SK Raina
- 8 DR Smith
- 9 CH Gayle
- 10 G Gambhir

##### TOP 10 BOWLERS (By Total Wickets)

- 1 DJ Bravo
- 2 MM Sharma
- 3 B Kumar
- 4 SP Narine
- 5 Harbhajan Singh
- 6 SL Malinga
- 7 JP Faulkner
- 8 Sandeep Sharma
- 9 YS Chahal
- 10 A Nehra

##### BEST ALL-ROUNDERS (Runs & Wickets)

- 1 SR Watson
- 2 RA Jadeja
- 3 MC Henriques
- 4 AD Russell
- 5 JP Faulkner
- 6 DJ Bravo

#### 2 KEY PARAMETERS TO FOCUS ON

##### Batting Performance

- Total Runs, Batting Avg., Strike Rate
- Boundaries %, Consistency
- Performance in pressure situations

##### Bowling Performance

- Total Wickets, Bowling Avg., Economy Rate
- Bowling Strike Rate
- Powerplay & Death overs performance

##### All-Round Performance

- Runs + Wickets, Batting SR, Economy
- Multi-dimensional match impact

##### Consistency

- Average Runs/Wickets per season
- Stability of performance over years
- Regular contributions

##### Venue Specific Performance

- Runs & Wickets at each venue
- Home vs Away performance
- Suitability to pitch conditions

##### Match-Winning Ability

- Player of the Match awards
- Impact in winning & knockout matches
- Performance under pressure

##### Fielding Performance

- Catches taken, Run-outs effected
- Overall fielding consistency
- Saves runs & creates opportunities

##### Team Balance

- Right mix of openers, finishers, all-rounders
- Fast bowlers, spinners, wicketkeepers
- Balance of skills & experience

#### 3 PLAYERS SUITED TO SPECIFIC VENUES

##### Top Run Scorers by Venue (Total Runs)

##### Wickets Taken by Venue (Total Wickets)

##### Player vs Venue Performance (Heatmap – Total Runs)

#### 4 RECOMMENDED TEAM COMPOSITION

##### OPENERS (2)

- Consistent scorers
- Good SR
- Powerplay experts

##### MIDDLE ORDER (3)

- Build innings
- Anchor + Aggression
- Handle pressure

##### FINISHERS (2)

- High Strike Rate
- Boundary hitters
- Close match ability

##### ALL-ROUNDERS (3)

- Batting + Bowling
- Provide balance
- Match winners

##### BOWLERS (4)

- 2-3 Fast Bowlers
- 1-2 Spinners
- Variety crucial

##### WICKETKEEPER (1)

- Agile behind stumps
- Handy with bat

#### 5 SQL METRICS DERIVED FROM IPL DATABASE

##### BATTING METRICS

- Total Runs
- Batting Average
- Strike Rate
- Runs per Match
- Highest Score

##### BOWLING METRICS

- Total Wickets
- Wickets per Match
- Bowling Avg.
- Economy Rate
- Bowling SR

##### ALL-ROUND METRICS

- Total Runs + Wickets
- Batting SR
- Bowling Economy
- All-round Rankings

##### MATCH IMPACT METRICS

- Player of the Match
- Contributions in Wins
- Knockout Performance
- Pressure Handling

##### VENUE-BASED METRICS

- Runs by Venue
- Wickets by Venue
- Home vs Away Stats
- Condition Suitability

#### 6 CONCLUSION

A successful IPL team is built with a data-driven strategy by evaluating players on multiple parameters. Selecting consistent performers, venue specialists, match winners, and quality all-rounders ensures a balanced squad. Combining analytical insights with team balance increases the probability of winning more matches and the championship.

**KEY BENEFIT:** Data-driven player evaluation helps in selecting the right players, optimizing team balance, and improving chances of consistent success.

#### 1 CORE PERFORMERS FOR RCB (HISTORICAL CONTRIBUTIONS)

##### TOP RUN SCORERS

| Player Name       | Total Runs |
|-------------------|------------|
| V Kohli           | 153,264    |
| AB de Villiers    | 118,080    |
| CH Gayle          | 80,066     |
| KL Rahul          | 21,851     |
| PA Patel          | 12,112     |
| SR Watson         | 11,915     |
| Mandeep Singh     | 8,167      |
| Shane Watson      | 7,640      |
| Virat Singh       | 6,723      |
| Washington Sundar | 5,165      |

##### TOP WICKET TAKERS

| Player Name   | Total Wickets |
|---------------|---------------|
| YS Chahal     | 2436          |
| MA Starc      | 1053          |
| SR Watson     | 864           |
| R Vinay Kumar | 800           |
| HV Patel      | 575           |
| VR Aaron      | 528           |
| AB Dinda      | 396           |
| MC Henriques  | 370           |
| S Aravind     | 251           |
| P Negi        | 237           |

★ Retain core contributors like Virat Kohli, AB de Villiers, and key bowlers who have delivered consistently for RCB.

#### 2 VERSATILE ALL-ROUNDERS FOR BALANCE

##### SELECTION CRITERIA

- ✓ Total Runs > 500
- ✓ Total Wickets > 20

##### TOP ALL-ROUND PLAYERS (Both Bat & Ball)

| Player Name     | Total Runs | Total Wickets |
|-----------------|------------|---------------|
| Shane Watson    | 1315       | 54            |
| Ravindra Jadeja | 670        | 56            |
| MC Henriques    | 643        | 37            |
| Andre Russell   | 527        | 35            |

##### RUNS & WICKETS COMPARISON – TOP ALL-ROUNDERS

Target quality all-rounders who can strengthen both batting depth and bowling options.

✓ These players bring balance, flexibility and match-winning.

#### 3 POSITIVE INFLUENCE ON TEAM PERFORMANCE

##### BY WIN PERCENTAGE (Min. 30 Matches)

| Player Name      | Matches Played | Win %  |
|------------------|----------------|--------|
| Suresh Raina     | 66             | 62.12% |
| Dwayne Smith     | 57             | 61.40% |
| Dwayne Bravo     | 51             | 60.78% |
| Ravindra Jadeja  | 66             | 60.61% |
| Michael Hussey   | 45             | 60.00% |
| Brendon McCullum | 40             | 60.00% |
| MC Henriques     | 40             | 60.00% |
| Virat Kohli      | 82             | 57.32% |
| AB de Villiers   | 79             | 56.96% |
| Rohit Sharma     | 71             | 56.34% |

##### BY MAN OF THE MATCH AWARDS

| Player Name     | Awards |
|-----------------|--------|
| David Warner    | 11     |
| Ajinkya Rahane  | 10     |
| Virat Kohli     | 9      |
| AB de Villiers  | 9      |
| Rohit Sharma    | 8      |
| Michael Hussey  | 7      |
| Dwayne Smith    | 7      |
| Suresh Raina    | 7      |
| Ravindra Jadeja | 6      |
| Andre Russell   | 6      |

★ Players with higher win % and more Man of the Match awards consistently uplift team morale and deliver in crucial situations.

#### 4 STRATEGIC RECOMMENDATIONS FOR RCB BEFORE THE MEGA AUCTION

##### 1. RETAIN CORE PLAYERS

- Retain match-winners like Virat Kohli, AB de Villiers and key wicket takers.
- Build the team around experienced and consistent performers.

##### 2. STRENGTHEN BATTING DEPTH

- Add aggressive top-order batters.
- Invest in reliable middle-order finishers.
- Ensure strong hitting in death overs.

##### 3. BOLSTER BOWLING ATTACK

- Acquire quality fast bowlers for powerplay and death overs.
- Target skillful spinners who can control middle overs.
- Reduce over-dependence on few bowlers.

##### 4. INVEST IN ALL-ROUNDERS

- Prioritize all-rounders who contribute with bat and ball.
- Look for players with >500 runs and >20 wickets potential.

##### 5. IMPROVE DEATH-OVER BOWLING

- Select bowlers with low economy and high wicket-taking ability.
- Focus on yorker specialists and pressure handlers.

##### 6. BUILD SQUAD BALANCE

- Maintain the right mix of batters, bowlers, all-rounders and WK.
- Ensure depth in every department for injury and workload management.

##### 7. DEPENDABILITY & CONSISTENCY

- Focus on players with consistent multi-season performance.
- Avoid over-reliance on a few individuals.

##### 8. DATA-DRIVEN AUCTION STRATEGY

- Use analytics for player comparisons and matchups.
- Analyze venue performance and role suitability before bidding.

##### 9. DEVELOP YOUNG TALENT

- Invest in young Indian talent for long-term success.
- Provide opportunities and grooming pathways.

#### 5 FACTORS DRIVING HIGH-SCORING MATCHES & THEIR IMPACT

##### KEY FACTORS

- Batting-friendly pitches & short boundaries
- Aggressive batting approach from the start
- Evolution of batting skills & power hitting
- Impact Player rule & squad depth
- Dew factor in night matches
- Field restrictions in powerplay overs
- Lack of quality death-over bowling

##### IMPACT ON VIEWERSHIP

- More boundaries, sixes & excitement
- Higher fan engagement & social buzz
- Big chases & last-over finishes
- Higher TV ratings & digital reach
- Increased commercial & sponsorship value

##### IMPACT ON TEAM STRATEGIES

- Focus on power hitters & finishers
- Importance of all-rounders
- Death-over specialist bowlers
- Preference for chasing totals
- Data-driven matchups & planning

**KEY BENEFIT:** By retaining core performers, targeting quality all-rounders, strengthening bowling and building a balanced squad, RCB can enhance team performance, fan engagement and increase chances of winning the IPL.

### 1. IDENTIFYING VERSATILE ALL-ROUND PLAYERS

#### OBJECTIVE

Identify players who contribute significantly with both bat and ball and add balance to the team.

#### APPROACH

- Calculate Total Runs (batting) for each player.
- Calculate Total Wickets (bowling) for each player.
- Select players with more than 500 runs and more than 20 wickets.
- These players are considered true all-rounders.

#### TOP ALL-ROUND PLAYERS (Both Bat & Ball)

| Player Name     | Total Runs | Total Wickets |
|-----------------|------------|---------------|
| Shane Watson    | 1315       | 54            |
| Ravindra Jadeja | 670        | 56            |
| MC Henriques    | 643        | 37            |
| Andre Russell   | 527        | 35            |
| Dwayne Smith    | 455        | 28            |
| JP Faulkner     | 436        | 25            |
| Kieron Pollard  | 412        | 24            |
| Jacques Kallis  | 389        | 29            |
| Shakib Al Hasan | 378        | 24            |
| James Neesham   | 321        | 22            |

#### FILTER CRITERIA

- Total Runs > 500
- Total Wickets > 20

#### SQL TECHNIQUES USED

- WITH Clause (CTE)
- JOIN
- GROUP BY
- HAVING / WHERE
- ORDER BY

#### RUNS & WICKETS COMPARISON – TOP ALL-ROUNDERS

These players have consistently contributed with both bat and ball, making them valuable all-rounders for any IPL team.

### 2. PLAYERS WHO POSITIVELY INFLUENCE TEAM PERFORMANCE

#### APPROACH

Analyze two key performance indicators to find players who positively influence team success.

#### 1 Win Percentage

Percentage of matches won when a player is part of the playing XI.

#### 2 Man of the Match Awards

Number of times a player has won Man of the Match award indicating match-winning performances.

#### TOP PLAYERS BY WIN PERCENTAGE (Min. 30 Matches Played)

| Player Name      | Matches Played | Matches Won | Win %  |
|------------------|----------------|-------------|--------|
| Suresh Raina     | 66             | 41          | 62.12% |
| Dwayne Smith     | 57             | 35          | 61.40% |
| Dwayne Bravo     | 51             | 31          | 60.78% |
| Ravindra Jadeja  | 66             | 40          | 60.61% |
| Michael Hussey   | 45             | 27          | 60.00% |
| Brendon McCullum | 40             | 24          | 60.00% |
| MC Henriques     | 40             | 24          | 60.00% |
| Virat Kohli      | 82             | 47          | 57.32% |
| AB de Villiers   | 79             | 45          | 56.96% |
| Rohit Sharma     | 71             | 40          | 56.34% |

0% 25% 50% 75% 100%

#### TOP PLAYERS BY MAN OF THE MATCH AWARDS

| Player Name     | Man of the Match Awards |
|-----------------|-------------------------|
| David Warner    | 11                      |
| Ajinkya Rahane  | 10                      |
| Virat Kohli     | 9                       |
| AB de Villiers  | 9                       |
| Rohit Sharma    | 8                       |
| Michael Hussey  | 7                       |
| Dwayne Smith    | 7                       |
| Suresh Raina    | 7                       |
| Ravindra Jadeja | 6                       |
| Andre Russell   | 6                       |

#### WIN % vs MAN OF THE MATCH AWARDS

★ Players towards top-right contribute more to wins and earn more awards.

#### KEY TAKEAWAYS

All-rounders bring balance and flexibility by contributing with both bat and ball.

Players with high win % are associated with more team victories.

Man of the Match winners consistently deliver match-winning performances.

Combining these insights helps identify impact players who uplift team morale and results.

#### STRATEGIC RECOMMENDATIONS

Select quality all-rounders to strengthen team balance.

Prefer players with high win % for critical team combinations.

Value players with multiple MoM awards for match-winning impact.

Consider venue performance for optimal match selections.

Build a squad with the right mix of batters, bowlers & all-rounders.

**KEY BENEFIT:** Selecting versatile all-rounders and impact players with high win % improves team balance, boosts morale, and increases chances of winning.

# CONCLUSION

Key Findings, Implications & Strategic Path Forward

## WHAT WE DISCOVERED

- ✓ **Top Performers Drive Success:** Players like Virat Kohli, AB de Villiers and Chris Gayle have been the most consistent run scorers, while bowlers like Dwayne Bravo and Bhuvneshwar Kumar lead wicket charts.
- ✓ **All-rounders Create Balance:** Players such as Shane Watson, Ravindra Jadeja, MC Henriques and Andre Russell deliver impact with both bat and ball, bringing flexibility to the playing XI.
- ✓ **Impact Players Elevate Team Performance:** Players with high win percentages and multiple Man of the Match awards (e.g., Suresh Raina, Dwayne Smith, Virat Kohli) consistently influence team morale and results.
- ✓ **High-scoring Matches Shape the Game:** Batting-friendly pitches, aggressive approach, dew and smaller boundaries are key drivers. These matches enhance viewership and push teams toward attacking strategies.
- ✓ **Toss and Conditions Matter:** Winning the toss and choosing to field has slightly higher success. Chasing under dew-prone conditions often leads to better outcomes.

## STRATEGIC RECOMMENDATIONS

Retain consistent core players who deliver across seasons.

Invest in quality all-rounders and finishers to build depth.

Strengthen bowling attack with wicket-taking bowlers, especially for death overs.

Use data-driven insights for player selection, matchups and venue strategies.

Focus on venue-specific planning and conditions-based strategies.

Build a balanced squad with the right mix of experience and young talent.

## KEY TAKEAWAYS

Consistent performers and impact players are critical for winning more matches.

All-rounders provide balance, flexibility and match-winning potential.

High-scoring games increase fan engagement, viewership and commercial value.

A well-balanced team with strong batting, bowling and fielding wins tournaments.

Analytics-driven decisions lead to smarter retentions, better auctions and strategic advantage.

“Data reveals patterns. Insights create clarity.  
Strategy turns insight into championships.”

By leveraging data, identifying the right players and making informed decisions, teams can build stronger squads and increase their chances of lifting the IPL trophy.
